

Knee Gaiter measuring form

We have made changes in the orthotics department to reduce the number of patients we are seeing during the covid 19 epidemic. One of these changes includes the process of ordering knee gaiters. To reduce the need for you to attend the clinic we would be very grateful if you could measure your own knee gaiter(s).

Please use the enclosed tape measure to measure the length of the knee gaiter. Measure from the top inside leg to just above the ankle bones (see below). The knee gaiters come in the sizes at the bottom of this form, once you have decided on the right size knee gaiter please call 01691 404442 to let us know the size and we'll order the gaiter(s) and send them out to you.

Thank you for your help and understanding.

Use the enclosed tape measure and measure in inches from crease of buttocks to just above the ankle bones. See image as reference for how long the gaiter should be then pick a length below
