1 Safety

1.1 Safety Thermometer

On one day each month we check to see how many of our patients suffered certain types of harm whilst in our care. We call this the NHS Safety Thermometer. The Safety Thermometer looks at four harms:

1. Pressure Ulcers
2. Falls
3. Blood Clots
4. Urine Infections (for those patients who have a urinary catheter in place)

This helps us to understand where we need to make improvements. The score below shows the percentage of patients who did not experience any harm in the reported month.

97% of patients did not experience any of the four harms.

For more information, including a breakdown by category, please visit: <http://www.safetythermometer.nhs.uk/>

1.2 Health Care Associated Infections (HCIs)

HCAIs are infections acquired as a result of healthcare interventions. Clostridium difficile (C.difficile) and methicillin-resistant staphylococcus aureus (MRSA) bacteraemia are nationally monitored as we are trying to reduce the incidence of these infections. C.difficile is a type of bacterial infection that can affect the digestive system, causing diarrhoea, fever and painful abdominal cramps - and sometimes more serious complications. This bacterium does not normally affect healthy people, but because some antibiotics remove the 'good bacteria' in the gut that protect against C.difficile, people on these antibiotics are at greater risk.

The MRSA bacteria are often carried on the skin and inside the nose and throat. It is a particular problem in hospitals because if it gets into a break in the skin it can cause serious infections and blood poisoning. It is also more difficult to treat than other bacterial infections as it is resistant to a number of widely-used antibiotics.

We have a zero tolerance policy to MRSA bacteraemia infections and are working towards reducing C.difficile infections; part of this process is to set improvement targets. If the number of actual cases is greater than the target then we have not improved enough.

The table below shows the number of infections we have had this month, plus the improvement target and results for the year to date.

	C.difficile	MRSA
This month	0	0
Annual Target (April 17/18)	2	0
Actual to date	1	0

www.rjah.nhs.uk/Our-Services/Infection-Prevention-and-Control-at-RJAH.aspx

1.3 Pressure Ulcers

Pressure ulcers are localised injuries to the skin and/or underlying tissue as a result of pressure. They are sometimes known as bedsores. They can be classified into four grades, with one being the least severe and four being the most severe. The pressure ulcers reported include all validated avoidable/unavoidable pressure ulcers that were obtained at any time during a hospital admission that were not present on initial assessment.

This month **0** grade 1, **2** grade 2, **0** grade 3 and **0** grade 4 pressure ulcers were acquired during hospital stays:

Severity	Number of pressure ulcers
Grade 1	0
Grade 2	2
Grade 3	0
Grade 4	0

1.4 Falls

This measure includes all falls in the hospital that resulted in injury, categorised as moderate, severe or death, regardless of cause.

This includes avoidable and unavoidable falls sustained at any time during the hospital admission.

This month we reported no falls that caused 'moderate' harm, 'severe' harm or 'death':

Severity	Number of falls
Moderate	0
Severe	0
Death	0

1.5 Safe Staffing

Guidelines recently produced by the National Institute for Health & Care Excellence (NICE) make recommendations that focus on safe nursing for adult wards in acute hospitals and maternity settings. As part of the guidance we are required to publish monthly reports showing the registered nurses/midwives and unregistered nurses we have working in each area. The information included in the report shows the monthly planned staffing hours in comparison with the monthly actual staffing hours worked on each ward and/or the percentage of shifts meeting the safe staffing guidelines.

In order to view our reports please visit:

www.rjah.nhs.uk/About-Us/Publications/Corporate-Documents/Safe-Staffing-Levels.aspx

2 Experience

To measure patient and staff experience we use a variety of methods. The idea is simple: if you like using a certain product or doing business with a particular company you like to share this experience with others.

2.1 Patient Experience

2.1.1 The Friends and Family Test

The Friends and Family Test (FFT) requires all patients to be asked, at periodic points or following discharge, 'How likely are you to recommend our ward/ service/organisation to friends and family if they needed similar care or treatment?'

This month 99% of our inpatients said they would recommend our services. This is based on a total of 545 responses received; this is a response rate of 45.2%.

*This result may have changed since publication, for the latest score please visit:

<http://www.england.nhs.uk/statistics/statistical-work-areas/friends-and-family-test/friends-and-family-test-data/>

We also asked 13 patients the following questions about their care:

	% Patient Responses
1. Did you always receive the menu choice you requested	80%
2. Have you felt well cared for by nursing staff during your stay	100%
3. During your stay, have you ever been disturbed by a lot of noise at night	20%
4. Have you always been kept informed and involved in the decisions about your care as much as you wanted to be, by health care professionals	80%
5. Percentage of call bells answered within 5 minutes	50%
6. Did a doctor spend enough time with you to answer all your questions after your operation	100%

2.2 A Patient's Story:

I am writing to let you know how wonderfully your hospital and your staff performed when I was admitted on Feb 1st for elective surgery.

I had a spinal operation performed by Mr Ahmad and his team, I am progressing well and this is in no small part due to the excellent level of surgical and nursing care that I received, whilst an in-patient for three days.

This was only the second time that I have been an in-patient in my nearly 70 years - the previous time was when I was a boy to have my tonsils out!

Each member of staff that I interacted with was always interested in my comfort and welfare. More importantly they treated me with respect and as an equal partner, so I would like to record my thanks to each and every one of your staff for making my short stay in RJAH truly memorable and medically beneficial. You collectively have a great deal to be proud of at RJAH.

2.3 Staff Experience

2.3.1 The Friends and Family Test

The Friends and Family Test (FFT) requires staff to be asked, at periodic points: 'How likely are you to recommend our organisation to friends and family if they needed care or treatment?' and 'How likely are you to recommend our organisation to friends and family as a place to work?'

For July 2017 – September 2017, 100% of staff said that they would recommend our organisation to friends and family if they needed care and treatment. This is based on 31 responses.

*This result may have changed since publication, for the latest score please visit:

<http://www.england.nhs.uk/statistics/statistical-work-areas/friends-and-family-test/friends-and-family-test-data/>

We also asked staff the following question:

	% Recommended
1. Would you recommend this ward/unit as a place to work?	74%

3 Improvement

3.1 Improvement story: we are listening to our patients and making changes

When trying to humour a teenage patient in Theatre who was becoming stressed by the situation, on the spur of the moment an Anaesthetist used a "prop" which he felt would be an innocent joke to lighten the moment. Instantly he knew that this "prop" had not been the appropriate thing to use or say, so upon reflection of his actions, he will not use any props in this manner again.
